

Emerging Decarbonization Measures & Load Management Approaches for Commercial & Industrial Customers

Tuesday, March 25th

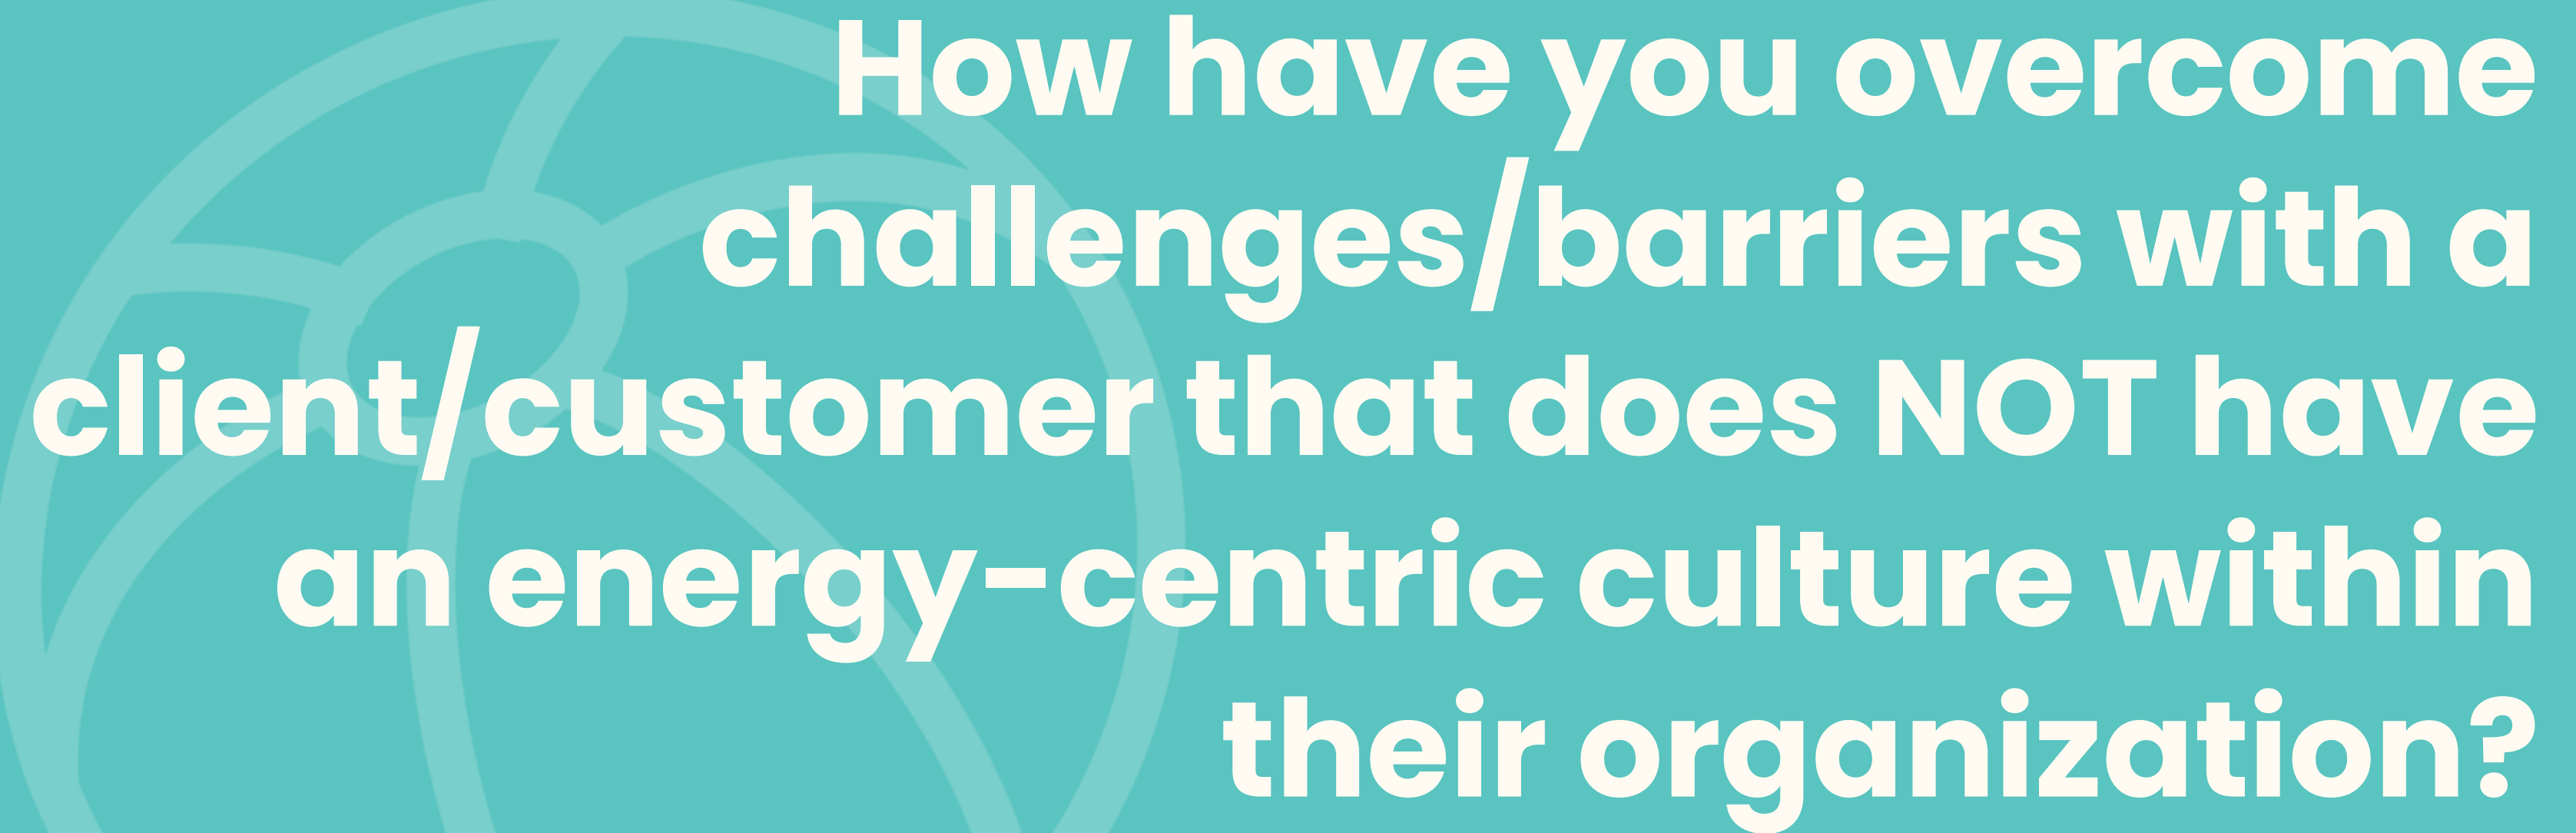

A stylized, abstract graphic of a sailboat in a teal color, positioned in the background. The sailboat has a large, triangular sail and a simple hull. The text "Survey Says!" is overlaid on the sail.

“Survey Says!”

What is a sector and/or a specific measure that the audience should be paying more attention to and why?

When you think of the word "innovation" what does that mean to you? Do you have any concrete examples of innovative things you have worked on or think the audience should look into?

The background is a solid teal color. On the left side, there is a faint, light-colored circular graphic that resembles a stylized globe or a network of interconnected nodes and lines.

**How have you overcome
challenges/barriers with a
client/customer that does NOT have
an energy-centric culture within
their organization?**

**What are some current projects
or recent work that
demonstrates leveraging
incentive programs in creating
customer centric solutions?**

THANK YOU
